### **DETAILED ACTION**

1. This action is in response to the application filed 08/28/2000.
2. Claims 1-9 have been examined and are pending in the application.

### ***Specification***

3. The abstract of the disclosure is objected to because: it contains more than one paragraph. Correction is required. See MPEP § 608.01(b).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Thomson U.S Patent No. 6,182,283.

As to claim 8, Thomson teaches executing a set of assembler directives including a macro call directive (compiled and linked into an executable file, lines 31-32 column 4), naming a location in a macro section (Function A::f(), Fig. 10) in an object code module (Object Module 1, Fig. 10) containing code sequences; marking at an insertion

location (Fig. 11B) where code sequences are to be inserted; generating a macro call relocation identifying the named location in the macro section (lines 7-18 column 6); and generating a set of relocations for selecting code sequences for insertion at the insertion location (step 52 to step 72 of Fig. 5).

As to claim 1, note the discussion of claim 8 above.

As to claim 2, Thomson further teaches macro relocations calculate conditions resolvable at link time to determine which of code sequences is to be included in the executable program (lines 1-14 column 17).

As to claim 3, Thomson further teaches a relocation which supplies one parameter with an index (an override function with parameters, lines 61-65 column 1).

As to claim 4, note the discussion of claim 3 above.

As to claim 5, note the discussion of claim 8 above.

As to claims 6-7, note the discussion of claim 3 above.

As to claim 9, note the discussion of claim 8 above.
